will bring a package of breakfast flakes with a delicious new corn flavour - flakes that don't mush down when milk or cream is added, nor are they "chaffy" in the package like the ordinary kind.

These New Post Toasties are manufactured by a new process using quick, intense heat which raises tiny bubbles over each flake, the distinguishing characteristic. And the new process also brings out a new com flavour, never tasted in corn flakes of the past.

Try a handful dry - they're good this way and the test will reveal their superior flavour. But they're usually served with milk or cream.
